

Portable Chiller Makes Tender Conversion Easy

Every processor knows how expensive it can be for a tender to lose its refrigeration

Seasonal plant mobilization costs are huge. Idle tenders, fishermen, and plants cost a lot of money during the season ... costs that can never be recovered.

IMS Plug & Play chilling systems are designed for quick installation—HOURS not days. They can be moved from one vessel to another or staged at the plant for emergency use.

The RSW chillers from IMS are the **“first major system put onboard that didn’t have any bugs to work out.”** Jon has found the units to be **“highly efficient, and simple to use.”**

Jon Forsythe, skipper, T/V Kari Marie

“We have an RSW unit on the Ocean Hunter that we use in our trawl cod fishery and then remove for the Alaska scallop season. The Arctic Hunter has a hatch-mounted blast unit for our freezer hold that we use during the Alaska scallop season and remove for our crab fishery. It is this need to change from fishery to fishery that IMS has helped us to do much quicker with their portable refer equipment than with traditional heavy and bulky refrigeration designs.”

Jim Stone, owner, T/V Arctic Hunter and T/V Ocean Hunter

IMS Titanium Chiller Systems Save Norton Sound King Crab

Unique summer king crab fishery presented a challenge for Norton Sound Processor

The delicate red king crab are caught by smaller vessels in Norton Sound and brought by tender to the processing plant. Norton Sound Seafood Products was losing too many of the prized king crab to brackish water and varied temperature conditions.

IMS project manager Grant Seran worked with the processor to solve the problem. Grant explains, “We like to work collaboratively with our customers, that’s how we understand their problem and come up with the best solutions.”

Self-contained electric or hydraulic titanium chilling systems

Both East and West Coast fisheries find that their IMS live systems perform ...

“You get no critically weak whatsoever ... no dead crab, and you get paid for everything you bring in,” says David Croft, skipper of the M/V Stephanie Colleen. When the water’s warm ... **“If I was fishing the old way with crab on ice, could only fish a maximum of two days then run back in.”**

Crab tender *Inaliq* equipped with four portable live holding tanks, titanium chillers and aeration system

Shrink losses, stay out longer and bring your product to market livelier. See what that does to your bottom line!
